👤 PROFILE

Web Developer / Software Engineer expert in advanced web development technologies. Developer with Experience in Ruby on Rails able to work in fast paced environment while delivering a high standard. Adept with tools and process to design and launch cutting edge websites and applications. Known for ability to troubleshoot, analyze and engineer web technologies.

📁 EMPLOYMENT HISTORY

Programmer / Analyst at Amazon Logistics AMZL, Remote

August 2019 — June 2022

Created a network level deliveries performance meeting platform in RoR. These meeting center around Logistics performance management. The platform ingested data from multiples sources to piece together delivery scorecards and other supporting metrics. These meetings prompted a delivery partner in its meeting UI about relevant performance related question for the week with the goal of tracking and improving performance. Big data was produced and archived from the output of all those meetings. Compliance reporting included a master report, daily mailers and end of week summary.

- The website included many big data features. A one page report provided the status of every delivery station and delivery partner. Multiple deep dive views provided accrued metrics about the performance of the delivery partners.
- The Webapp became almost fully automated (97%) overtime. Reporting was produced automatically. The site reset and consumed new data automatically, on a weekly basis. Multiple summary/report mailers generated automatically.

Software Engineer at Kin Insurance, Remote

June 2022 — July 2023

Worked in a team responsible for all aspects of Expansions in all three applications of the insurance platform. Applications included the main insurance platform, the API in charge of rating policies as well as the site/API in charge of generating policy documents. Subsequently worked on team that mainly developed the main insurance platform, insurance management system. All code had to be properly tested with the Rspec testing suite.

- Worked on projects that added a few new states to the current home insurance platform. Delivery of new state functionality was timely and with minimal bugs. Bugs were fixed in QA. Also, worked on adding new insurance features to these states as well as customizing the standard rules, feature for the new state.
- Worked on a system which created insurance moratoria for the cancellation of policies. Moratoria in the event that government regulations temporarily prohibited the cancellation of policies in storms affected regions. This saves many productive hours from multiple teams as previously this work was performed manually.

ICQA Program Developer at Amazon, Ruskin, FL

November 2017 — August 2019

Full Stack Ruby on Rails developer working on different projects from the ground up. Started role with no codebase. This made responsibilities beginning with setting up a cloud development Linux desktop, setting up repositories up to setup and deployment of the internal websites. Worked on several project with the most salient being two below. These projects were developed and delivered on a timely basis.

- In the first and biggest project I lead and wrote upwards of 60% of the code for a multi-function dashboard and data aggregator. Data aggregation from different sources including APIs, Redshift and MySQL sources cached locally on Postgres and set on timed Cron jobs. Dashboards include other native features which capture user data such as shift notes.
- Learning management system LMS which tracked curriculum completion of users in multi week views. LMS included one page JS quizzes which displayed the result and if retaking was necessary. Evaluation form were created for peer to track and monitor progress. The status of completion of the curriculum, quizzes and peer evaluations were all displayed in a master report with customizable views.

Asset Services Investigations Analyst at Citibank N.A., Tampa, FL

2009 — 2016

Handled and answered high volume incoming inquiries for accounts held in direct custody for a customer base of institutional clients in the U.S., Europe, Asia and Latin America.

- Recognized as Subject Matter Expert (SME) with exceptional ability to document processes, eliminate duplication of services, and facilitate operational standardization. Strong understanding of SWIFT. Expertise in rescuing at-risk accounts. Analyzed, researched and replied to client inquiries pertaining to both income and corporate actions events from Latin American, U.S. & Canadian markets.
- Prepared presentations and metrics for key clients' monthly calls. Maintained and managed an issues list vetted with multi teams including client, management, IT and Product.
